

Assurance

Due to the constant growth of Workload Automation environments, Schedulers may not have the time or ability to validate the accuracy of changes adequately before they are moved into production. Consequently, they may struggle to maintain confidence that changes are being adequately checked or tested before they are migrated into a production environment. ACCE provides insight into all aspects of the change by using its validation engine to check the jobs in the change request before anyone even looks at it.

Management

Management is constantly pressured to do more with less. This is often difficult given the consistent growth associated with Workload Automation. ACCE provides an additional layer of management with all the

Figure 2 – Validation Engine

necessary automation and controls to grow without sacrificing accuracy.

Security

With the added breadth of capabilities offered in modern Workload Automation solutions, more users are now granted access to Workload Automation environments. With that access, corporate governance has the expectation that know more than just who is accessing the environment. ACCE ensures that only the appropriate staff has access to make changes in your Workload Automation environments.

ACCE Benefits Include:

- Automated Back-out of Changes
- Archival of Prior Changes
- Validation Engine
- Sendevent Action Performance
- Job Attribute Mapping
- Change Queue Balancer
- Automated Migrations of Jobs and Entities (Machines, calendars, Global Variables)
- Web Based UI
- Extensive Reporting
- Change Forecasting
- Full Lifecycle Testing
- Detailed Audits
- LDAP Integration
- Dashboard
